Summary

Full-stack software engineer with **3+ years** of experience building, shipping, and operating scalable web applications and cloud-native services. Proficient in **Python** and **TypeScript/React** across the stack – from designing RESTful APIs and data-driven backends to building responsive, component-based UIs. Experienced in integrating **AI/LLM capabilities** into production applications and working directly with customers to iterate in live environments. Strong foundation in data structures, algorithms, design patterns, and object-oriented architecture. Proven track record of owning features end-to-end – from design through delivery – with automated testing, CI/CD, and production-grade observability baked in. **MSc Cloud Computing; AWS Solutions Architect – Professional**. Dublin-based (Stamp 1G) – eligible for full-time employment in Ireland.

Technical Skills

- **Languages & Frameworks:** Python (FastAPI, Flask, Django), TypeScript/JavaScript (React 19, React Native, Node.js/Express), Java, SQL, Bash
- **Front-End:** React, React Native, Tailwind CSS, Zustand/Redux, Framer Motion; responsive design, component architecture, state management, A/B testing
- **Databases & Data:** PostgreSQL, MySQL, DynamoDB, Redis, Firestore, Supabase; schema design, query optimization, ETL, PySpark, data pipelines
- **AI & ML:** LLM integration (multi-model consensus, prompt engineering), ONNX inference, Gemini API, scikit-learn, TensorFlow/Keras, NLP, RAG pipelines
- **Testing:** Jest (3,000+ tests), Maestro (E2E), pytest, Playwright, JUnit; SAST/DAST (SonarCloud, OWASP ZAP); TDD, code review
- **CI/CD & DevOps:** GitHub Actions, Jenkins, AWS CodePipeline, EAS Build; automated test gates, blue/green and canary deployments
- **Cloud:** AWS (EC2, ECS/Fargate, EKS, Lambda, RDS, S3, API Gateway, SQS/SNS, CloudFront, Route 53), Firebase, Supabase, Docker, Kubernetes/Helm, Terraform
- **Observability & Practices:** Prometheus/Grafana, CloudWatch, PostHog, X-Ray; SLO/SLI tracking, distributed tracing; Git, Linux, microservices, agile, GDPR

Experience

Clover IT Services – New York, NY (Remote)

Jun 2022 – Jul 2024

Software Engineer / Site Reliability Engineer

- Designed, developed, and maintained **8 production microservices** across a multi-region AWS SaaS platform; owned features end-to-end from requirements through implementation, testing, and production deployment.
- Built backend services in **Python** (FastAPI, Flask) and **Node.js**, implementing RESTful APIs, data orchestration layers, and event-driven integrations (SQS/SNS) across 3 AWS regions.
- Developed reusable front-end components and internal tooling UIs, collaborating with product managers to translate requirements into well-architected user experiences.
- Established **pytest and Jest test gates** across 10+ services in CI/CD pipelines; reduced release lead time from 3 days to **4–6 hours (85% improvement)**.
- Architected full-stack observability (Prometheus/Grafana, CloudWatch, X-Ray) with SLO/SLI tracking; reduced **MTTR by 35%** through proactive alerting and root cause analysis.
- Designed self-service infrastructure using Terraform modules and containerised deployments (Docker, EKS/Helm); sustained **99.9% uptime** and delivered **22% infrastructure cost reduction**.
- **Promoted to team lead within 14 months**; mentored 3–4 engineers, led design reviews, and championed engineering best practices.

Seattle Kraken (NHL) – Seattle, WA

Jun 2021 – May 2022

Data Engineering Intern

- Built automated data pipelines in **Python** (PySpark, Azure Data Factory) for analytics ingestion and validation; reduced weekly report preparation time by **30%** across 500K+ records supporting real-time dashboards.
- Developed internal reporting tools and interactive dashboards using **React** and D3.js, enabling non-technical stakeholders to self-serve analytics without engineering involvement.
- Implemented data quality checks catching **15+** silent data corruption incidents before production; partnered with engineering to debug ETL reliability and improve data freshness.
